

Exchanging CibraCoin for Fertilizer

CibraCoin is a family of tokens, which can be exchanged for physical fertilizer in pre-established volumes, depending on the type of token.

At this moment we have available the following tokens:

CibraCoin	Fertilizer
FMAP	MAP 11-52-00
FUREA	UREA 46-00-00
FKCL	KCL 00-00-60

There are two options for making the exchange for physical fertilizer:

- Exact parity exchange according to the table. In this case, 1 token will correspond to 1kg of fertilizer.
- Exchange for another simple fertilizer element or mixture, in which 1 token must be converted according to Cibra's price list.

Requirements for exchange

- **Minimum amount of tokens for exchange (with physical output of the fertilizer):** Minimum conversion of 15000 tokens plus the number of tokens needed to cost the transaction fee if CibraCoin is going to be used as payment.
- **Maximum limit for issuance of tokens by Cibra in the year 2022:** Considering the entire family of CibraCoin tokens, the total limit for issuance is 1,746,000,000 tokens*.
- **Loading fee:** The loading fee is not part of the parity, and it will be informed to the customer at the time of the conversion order according to the location.
- **Loading Location:** The parity between CibraCoin and the Fertilizer CFR is valid only for withdrawal in Paranaguá, plus the loading fee. However, the customer may request to pick up the product at any Cibra unit, which if available, the parity will be recalculated according to the local price list.
- **Shipping:** Shipping is at the customer's expense (FOB) who must inform the loading date at the time of conversion.
- **Period for exchange:** This may occur at any time, upon Cibra's availability, which will be informed at the time of consultation. If the required product is not available for immediate withdrawal, the next possible delivery date will be informed.
- **Non-withdrawal:** If there is no collection on the scheduled date, storage and insurance fees will be charged for the period that the fertilizer is stored at Cibra. Storage and insurance fee: R\$ 15* reais per ton per month.

Step-by-step for exchanging tokens for fertilizer, with physical output in the scheduled date

- Customer must inform by the e-mail contato@cibraCoin.com their intention to convert CibraCoin into fertilizer, informing the desired formulation, withdrawal date, total volume, packaging and location. In case agricultural support is needed, it can be requested on the same email.

- Cibra will return the quotation for the day to the customer, already considering the conversion plus the additional charge for loading.
- Upon customer's agreement, a fertilizer purchase contract will be issued with the loading date and commercial conditions previously agreed, as well as the conversion conditions.
- According to the number of tokens to be exchanged (corresponding to the exchange ratio informed after consultation with Cibra), the interested party must transfer the CibraCoin® tokens from their wallet to Cibra's wallet - in operation via Exchange STONOX.
- Customer must arrange the freight to pick up the fertilizer at the unit and day agreed.
- Cibra will issue an Invoice for the sale of the fertilizer at the time product is being withdrawn from the unit.
